Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

Sesha is developing a weather monitoring system for a region with multiple weather stations. Each weather station collects temperature data hourly and stores it in a 2D array.

Write a program that can add the temperature data from two different weather stations to create a combined temperature record for the region.

Input Format

The first line of input consists of two space-separated integers N and M, representing the number of rows and columns of the matrices, respectively.

The next N lines consist of M space-separated integers, representing the values of the first matrix.

The following N lines consist of M space-separated integers, representing the values of the second matrix.

Output Format

The output prints the addition of the two matrices in N rows and M columns, representing the combined temperature record.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 3 3

1 2 3

4 5 6

7 8 9

1 1 1

2 2 2

3 3 3

Output: 2 3 4

6 7 8

10 11 12

Answer

// You are using Java

```
import java.util.*;
```

```
class Sum{
```

```
    public static void main(String args[]){
```

```
        Scanner sc = new Scanner(System.in);
```

```
        int x=sc.nextInt();
```

```
        int y=sc.nextInt();
```

```
        int a[][]=new int[x][y];
```

```
        int b[][]=new int[x][y];
```

```
        for(int i=0;i<x;i++){
```

```
            for(int j=0;j<y;j++){
```

```
                a[i][j]=sc.nextInt();
```

```
            }
```

```
        }
```

```
        for(int i=0;i<x;i++){
```

```
            for(int j=0;j<y;j++){
```

```
                b[i][j]=sc.nextInt();
```

```
    }  
  }  
  for(int i=0;i<x;i++){  
    for(int j=0;j<y;j++){  
      System.out.print((a[i][j]+b[i][j])+" ");  
    }  
    System.out.println();  
  }  
}
```

Status : Correct
